

TN SKILLS

SCRIPT -CONTROLLED ACL RESTRICT RECORD

BASED ON FIELD VALUE

PHASE 2 – REQUIREMENT ANALYSIS

1. User Requirements

The system should provide different levels of access to users based on their assigned roles. EEE users should be able to view only EEE branch records, while administrators should have full access to all records.

2. Functional Requirements

- Create users and assign roles.
- Create custom roles bb1, bb2, bb3, and bb4.
- Create the Institution Details table.
- Store student and faculty information.
- Add records with ECE, EEE, and CSE branch values.
- Implement Read, Create, Write, and Delete ACLs.
- Restrict EEE user access based on the Branch field.
- Allow administrators to access all records.

3. Data Requirements

The Institution Details table should contain:

- Student Roll Number
- Student Name
- Faculty Name
- Branch
- Email
- Phone Number
- Description

4. Security Requirements

The system should use role-based ACLs to control record operations:

- bb1 – Read
- bb2 – Create
- bb3 – Write
- bb4 – Delete
- Admin – Full access

5. Expected Outcome

The required users, roles, table fields, records, and ACL permissions are clearly identified. The system requirements are defined to provide controlled and secure access to records based on user roles and branch values.
