

TN SKILLS

SCRIPT -CONTROLLED ACL RESTRICT RECORD

BASED ON FIELD VALUE

PHASE 5 – PROJECT DEVELOPMENT

1. USER AND ROLE CREATION

A test user named EEE User was created in ServiceNow. Four custom roles, bb1, bb2, bb3, and bb4, were created and assigned to the user.

2. Institution Details Table Creation

A custom table named Institution Details with the table name institution details was created. The required fields were added to store student and faculty information.

3. Record Creation

Multiple records were created in the table using different branch values such as ECE, EEE, and CSE.

4. Read ACL Development

A Read ACL was created for u_institution_details. The ACL requires the bb1 role and uses the condition Branch is EEE. A script was added to allow administrators full access and control access for users with the required role.

5. Create ACL Development

A Create ACL was created for the table with the bb2 role to control record creation.

6. Write ACL Development

A Write ACL was created with the bb3 role to control record modification.

7. Delete ACL Development

A Delete ACL was created with the bb4 role to control record deletion.

8. Expected Outcome

The project is developed with role-based ACLs that control Read, Create, Write, and Delete operations on the Institution Details records.
